BOD/COD ratio: 84.5% (OECD 302B/ISO 9888)

**2-(2-butoxyethoxy)ethanol:**

The substance miscible in water and would leach into the groundwater, be lost in groundwater and be biologically degraded.

85% (28 d, Ready Biodegradability: Modified MITI Test (s)) readily biodegradable

**ethylene glycol monohexyl ether:**

Aerobic biodegradability - Exposure time 28 d

The volatile siloxanes with low molecular weight have a low water solubility and evaporate in the air. Volatile siloxanes with low molecular weight degrade in the air by reacting with hydroxyl radicals, which are the major degradation process for most chemicals in the atmosphere. The volatile siloxanes with low molecular weight present in the soil, are eliminated through several simultaneous processes such as volatilization, hydrolysis and degradation catalyzed with clay.
